CLOTHES DRYER TIMERS

Robertshaw (formerly Eaton) CDT Series Clothes Dryer Timers were designed to respond accurately to the amount of time dialed in by the consumer. They can be described as plug-in electromechanical program timers. These timers are driven by a long life of permanent magnet synchronous motor rated at 3 Watts of power consumption. Timing functions are controlled by high accuracy molded cams. These timers have switches to control from two to 6 circuits. Connections to the timer terminals have been provided for quick disconnect plugs. Terminals are 1/4" x 5/16" (6.35 mm x 0.81 mm) male quick connects. All Robertshaw Clothes Dryer Timers are UL and CSA recognized.
